ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.*

(54) Title: PROCESS FOR THE PREPARATION OF AN OXIDIC CATALYST COMPOSITION COMPRISING A DIVALENT
AND A TRIVALENT METAL

(57) Abstract: Process for the preparation of an oxidic catalyst composition comprising a trivalent metal preferably aluminium, a
divalent metal preferably magnesium and more than 18 wt% of one or more compounds selected from the group consisting of rare
earth metal compounds, phosphorus compounds, and transition metal compounds, which process comprises the following steps:
(a) preparing a sodium-free precursor solution, (b) forming a precipitating by adding a sodium-free base to the precursor solution,
(c) optionally aging the precipitate, (d) drying the precipitate, and (e) calcining the dried precipitate. The resulting oxidic catalyst
composition is suitable as a metal trap in a fluid catalytic cracking process.
